
Dynamic pricing: household discounts and estimated consumer characteristics
Period 1 optimal discount
Low gamma (bottom 25%)
Middle gamma (middle 50%)
High gamma (top 25%)
Berry discount (% of posted price)
Estimated household type (posterior mean γ)
Period 1 optimal discount
Berry discount (% of posted price)
Estimated price sensitivity (posterior mean a)
Period 2 expected optimal discount
Berry discount (% of posted price)
Estimated household type (posterior mean γ)
Period 2 expected optimal discount
Berry discount (% of posted price)
Estimated price sensitivity (posterior mean a)
Each point is one berry-eligible household. Period 2 averages over that household's future consumption histories.
